

Dichiarazioni Dec : $D \rightarrow \text{nil} \mid \text{const } x : \underline{x = e} \mid D; D$

Sintesi \uparrow $D \in D \mid \text{peEnv}$

Semantica Statica $\Delta \in \text{TEnv}$ $\Delta \vdash d_0 : \Delta_0$

Associa d_0 a $d \in \text{Dec}$
 \cap
 TEnv

$\vdash \text{nil} : \emptyset$

$\vdash p : V$ (V è l'insieme degli id a cui p è significato)

$$\frac{\Delta \vdash e : \underline{x}}{\Delta \vdash \text{const } x : \underline{x} = e : [x \mapsto \underline{x}]}$$

Associa un tipo ad ogni espressione che non contiene errori di tipo nell'uso degli operatori

$$\frac{\Delta \vdash d_1 : \Delta_1 \quad \Delta[\Delta_1] \vdash d_2 : \Delta_2}{\Delta \vdash d_1 ; d_2 : \Delta_1[\Delta_2]}$$

$$\frac{\Delta \vdash d_1 : \Delta_1 \quad \Delta[\Delta_1] \vdash d_2 : \Delta_2}{\Delta \vdash d_1 ; d_2 : \Delta_2}$$

Esempio

$\Delta = \emptyset$

$\left\{ \begin{array}{l} \text{const } x : \text{bool} = \text{true}; d_1 \\ \text{const } x : \text{int} = 5; d_2 \\ \text{const } y : \text{int} = 6 * x; d_3 \end{array} \right.$

$d_1 ; \underline{d_2} ; d_3$
 \overline{d}

(non abbiamo un ambiente contestuale)

$d_1 ; d$

• $d_1 ; d$

per costruire l'ambiente statico di $d_1 ; d$
 dobbiamo costruire l'ambiente di d_1

$$\rightarrow \frac{\vdash d_1 : ? \quad \text{?} \times \dots}{\vdash d_1 ; d :}$$

Dichiarazioni Dec : $D \rightarrow \text{nil} \mid \text{const } x : \underline{c = e} \mid D; D$

Sintesi \uparrow $D \in D \mid \text{peEnv}$

Semantica Statica $\Delta \in \text{TEnv}$ $\Delta \vdash d_0 : \Delta_0$

Associa Δ_0 e $d_0 \in \text{Dec}$
 \cap
 TEnv

$\vdash \text{nil} : \emptyset$

$\vdash p : V$ (V è l'insieme degli id a cui p è significato)

$$\frac{\Delta \vdash e : \underline{c} \quad \text{Associa un tipo ad ogni espressione che non contiene errori di tipo nell'uso degli operatori}}{\Delta \vdash \text{const } x : \underline{c} = e : [x \mapsto \underline{c}]}$$

$$\frac{\Delta \vdash d_1 : \Delta_1 \quad \Delta[\Delta_1] \vdash d_2 : \Delta_2}{\Delta \vdash d_1 ; d_2 : \Delta_1[\Delta_2]}$$

$$\frac{\Delta \vdash d_1 : \Delta_1 \quad \Delta[\Delta_1] \vdash d_2 : \Delta_2}{\Delta \vdash d_1 ; d_2 : \Delta_2}$$

Esempio

$\Delta = \emptyset$

$\left\{ \begin{array}{l} \text{const } x : \text{bool} = \text{true}; d_1 \\ \text{const } x : \text{int} = 5; d_2 \\ \text{const } y : \text{int} = 6 * x; d_3 \end{array} \right.$

$d_1 ; d_2 ; d_3$

$d_1 ; d$

(non abbiamo un ambiente contestuale)

$d_1 ; d$

per costruire l'ambiente statico di $d_1 ; d$
 dobbiamo costruire l'ambiente di d_1

$$\rightarrow \frac{\vdash d_1 : ? \quad ? \rightarrow \dots}{\vdash d_1 ; d :}$$

① Elaborazione d_1 staticamente

$$\frac{\vdash \text{true} : \text{bool} \quad \text{per gli assomi delle esp}}{\vdash \text{const } x : \text{bool} = \underline{\text{true}} : [x \mapsto \text{bool}]}$$

$$\Rightarrow \frac{\emptyset \vdash d_1 : [x \mapsto \text{bool}] \quad \boxed{[x \mapsto \text{bool}] \vdash d : ?^2}}{\vdash d_1 ; d : ?}$$

② Elaborazione d staticamente

$$\frac{[x \mapsto \text{bool}] \vdash d_2 : ?^2}{[x \mapsto \text{bool}] \vdash d_2 ; d_3 : ?}$$

②a) Elaborazione d_2 staticamente

$$\frac{\begin{array}{c} [x \mapsto \text{bool}] \vdash 5 : \text{int} \\ \text{per gli assomi delle esp} \end{array}}{\begin{array}{c} [x \mapsto \text{bool}] \vdash \text{const } x : \text{int} = 5 : [x \mapsto \text{int}] \\ \text{per le regole di applicazione} \end{array}}$$

$$\frac{[x \mapsto \text{bool}] \vdash d_2 : [x \mapsto \text{int}]}{[x \mapsto \text{bool}] \vdash d_2 ; d_3 : ?}$$

②b) Elaborazione d_3 staticamente

$$\frac{\begin{array}{c} [x \mapsto \text{int}] \vdash 6 * x : ?^2 \\ \text{per le regole di applicazione} \end{array}}{\begin{array}{c} [x \mapsto \text{int}] \vdash \text{const } y : \text{int} = 6 * x : ?^2 \end{array}}$$

2c) Valutiamo $6 * x$ sotto comune

$$\frac{\text{per gli ossioni delle exp} \quad \Delta}{[x \mapsto \text{int}] \vdash 6 : \text{int}} \quad \frac{\Delta \quad \text{per gli ossioni delle exp}}{[x \mapsto \text{int}] \vdash x : \text{int} \text{ perche' } \Delta(x) = \text{int}}$$
$$[x \mapsto \text{int}] \vdash 6 * x : \text{int}$$

$$\frac{[x \mapsto \text{int}] \vdash 6 * x : \text{int}}{[x \mapsto \text{int}] \vdash \text{Const } y : \text{int} = 6 * x : [y \mapsto \text{int}]}$$

chiude il passo 2b

$$\frac{[x \mapsto \text{bool}] \vdash d_2 : [x \mapsto \text{int}] \quad [x \mapsto \text{int}] \vdash d_3 : [y \mapsto \text{int}]}{[x \mapsto \text{bool}] \vdash \underbrace{d_2; d_3}_{d} : \underbrace{[x \mapsto \text{int}] [y \mapsto \text{int}]}_{= [x \mapsto \text{int}, y \mapsto \text{int}]}}$$

chiude il passo 2a
e quindi il passo 2

Di conseguenza il passo 1

$$\frac{\vdash d_1 : [x \mapsto \text{bool}] \quad [x \mapsto \text{bool}] \vdash d : [x \mapsto \text{int}, y \mapsto \text{int}]}{\vdash d_1; d : [x \mapsto \text{bool}] [x \mapsto \text{int}, y \mapsto \text{int}]}$$
$$[x \mapsto \text{int}, y \mapsto \text{int}]$$

Semantica dinamica

$\rho \in \text{Env}$
 $d, d' \in \text{Dec}$

$\vdash_{\Delta} d \rightarrow d'$

$\vdash \text{nil} \rightarrow \emptyset$

$\rho \in \text{Conf. determinati}$

$$\frac{\vdash e \rightarrow^* k}{\vdash \text{const } x : e = e \rightarrow [x \mapsto k]}$$

$$\frac{\vdash d_1 \rightarrow d'_1}{\vdash d_1; d_2 \rightarrow d'_1; d_2}$$

$$\frac{\rho[\rho_1] \vdash d_2 \rightarrow d'_2}{\vdash \rho_1; d_2 \rightarrow \rho_1; d'_2}$$

$$\vdash \rho_1; \rho_2 \rightarrow \rho_1[\rho_2]$$

$$\frac{\vdash d_1 \rightarrow d'_1}{\vdash d_1 \text{ in } d_2 \rightarrow d'_1 \text{ in } d_2}$$

$$\frac{\rho[\rho_1] \vdash d_2 \rightarrow d'_2}{\vdash \rho_1 \text{ in } d_2 \rightarrow \rho_1 \text{ in } d'_2}$$

$$\vdash \rho_1 \text{ in } \rho_2 \rightarrow \rho_2$$

Elezioare (dinamicamente) una dichiarazione

$\text{Elab} : \text{Dec} \rightarrow \text{Env}$

$\forall d \in \text{Dec. } \text{Elab}(d) = \rho \in \text{Env} \text{ se}$

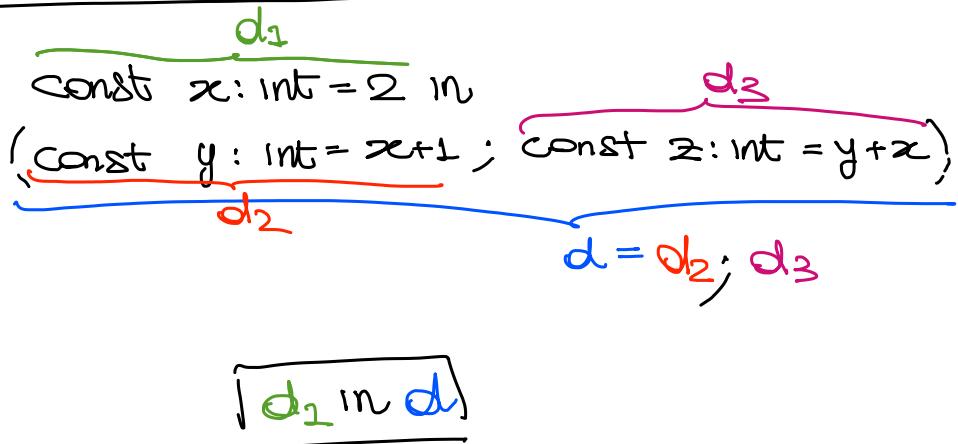

$$\vdash d \rightarrow^* \rho$$

$\text{Elab}(d_1; d) = \text{ambiente generato dall'applicazione delle regole della semantica dinamica}$

Equivalent : $\equiv \subseteq \text{Dec} \times \text{Dec}$

$$d_1 \equiv d_2 \quad \text{se} \quad \text{Elab}(d_1) = \text{Elab}(d_2)$$

Esempio

Primo passo:

$$\frac{\vdash d_1 \rightarrow^* ? \circled{1}}{\vdash d_1 \text{ in } d \rightarrow ? \text{ in } d}$$

① $\vdash \text{const } x: \text{int} = 2 \rightarrow [x \mapsto 2]$ completo il passo 1

$$\frac{\vdash d_2 \rightarrow [x \mapsto 2]}{\vdash d_1 \text{ in } d \rightarrow [x \mapsto 2] \text{ in } d} \quad \text{Primo passo di elaborazione}$$

Secondo passo *

$$\frac{\vdash [x \mapsto 2] \vdash d \rightarrow^* ?}{\vdash \underline{[x \mapsto 2] \text{ in } d} \rightarrow [x \mapsto 2] \text{ in } ?}$$

Elabelando d : primo passo $d_2; d_3 = d$

$$\frac{\vdash [x \mapsto 2] \vdash d_2 \rightarrow \circled{2}}{\vdash [x \mapsto 2] \vdash d_2; d_3 \rightarrow}$$

Elaborazione d₂

$$\frac{[x \mapsto 2] \vdash x+1 \rightarrow^* 2 \textcircled{2} \quad \uparrow}{[x \mapsto 2] \text{ const } y: \text{int} = x+1 \rightarrow}$$

② Valutazione di x+1

$$\cdot \frac{\stackrel{P}{\overbrace{[x \mapsto 2] \vdash x \rightarrow 2}} \quad \text{perche' } P(x)=2}{[x \mapsto 2] \vdash x+1 \rightarrow 2+1}$$

$$\cdot [x \mapsto 2] \vdash 2+1 \rightarrow 3 \quad \text{perche' } 2+1=3$$

$\Rightarrow [x \mapsto 2] \vdash x+1 \rightarrow^* 3$ completa la valutazione (2)

$$\frac{[x \mapsto 2] \vdash x+1 \rightarrow^* 3}{[x \mapsto 2] \vdash \text{const } y: \text{int} = x+1 \rightarrow [y \mapsto 3]}$$

Completa ②

$$[x \mapsto 2] \mapsto d_2 \rightarrow [y \mapsto 3]$$

$$[x \mapsto 2] \mapsto d_2; d_3 \rightarrow [y \mapsto 3]; d_3$$

Secondo passo di elaborazione di d = d₂; d₃

$$\frac{\textcircled{4} \quad \begin{array}{l} [x \mapsto 2, y \mapsto 3] \\ [x \mapsto 2][y \mapsto 3] \vdash d_3 \end{array} \rightarrow \textcircled{3}}{[x \mapsto 2] \vdash [y \mapsto 3]; d_3 \rightarrow}$$

$\textcircled{3}$ Esempio di d_3

$$\frac{\textcircled{4} \quad \begin{array}{l} [x \mapsto 2, y \mapsto 3] \vdash y + x \rightarrow \\ [x \mapsto 2, y \mapsto 3] \vdash \underline{\text{const}_2 : \text{int} = y + x} \end{array} \rightarrow \textcircled{3a}}{[x \mapsto 2, y \mapsto 3] \vdash y + x \rightarrow 3 + 2 \rightarrow}$$

$\textcircled{3a}$ Valutazione di $y + x$

$$\left\{ \begin{array}{l} \overbrace{[x \mapsto 2, y \mapsto 3] \vdash y \rightarrow 3}^p \quad \text{perche'} \\ \qquad \qquad \qquad p(y) = 3 \\ \hline [x \mapsto 2, y \mapsto 3] \vdash y + x \rightarrow 3 + x \\ \\ \overbrace{[x \mapsto 2, y \mapsto 3] \vdash x \rightarrow 2}^p \quad \text{perche'} \\ \qquad \qquad \qquad p(x) = 2 \\ \hline [x \mapsto 2, y \mapsto 3] \vdash 3 + x \rightarrow 3 + 2 \\ \\ [x \mapsto 2, y \mapsto 3] \vdash 3 + 2 \rightarrow 5 \quad \text{perche'} \quad 3 + 2 = 5 \\ \\ \rightarrow [x \mapsto 2, y \mapsto 3] \vdash y + x \rightarrow^* 5 \quad \text{completo se posso} \quad \textcircled{3a} \end{array} \right.$$

$$\frac{\textcircled{4} \quad \begin{array}{l} [x \mapsto 2, y \mapsto 3] \vdash y + x \rightarrow^* 5 \\ [x \mapsto 2, y \mapsto 3] \vdash d_3 \end{array} \rightarrow [z \mapsto 5]}{[x \mapsto 2, y \mapsto 3] \vdash d_3 \rightarrow [z \mapsto 5]}$$

completo se posso $\textcircled{3}$

$$\textcircled{*} \quad \frac{\textcolor{blue}{\left[\begin{smallmatrix} x \mapsto 2, y \mapsto 3 \end{smallmatrix} \right] \vdash d_3 \rightarrow \left[\begin{smallmatrix} z \mapsto 5 \end{smallmatrix} \right]}}{\left[\begin{smallmatrix} x \mapsto 2 \end{smallmatrix} \right] \vdash \left[\begin{smallmatrix} y \mapsto 3 \end{smallmatrix} \right]; d_3 \rightarrow \left[\begin{smallmatrix} y \mapsto 3 \end{smallmatrix} \right]; \left[\begin{smallmatrix} z \mapsto 5 \end{smallmatrix} \right]}$$

possibile successivo:

$$\left[\begin{smallmatrix} x \mapsto 2 \end{smallmatrix} \right] \vdash \left[\begin{smallmatrix} y \mapsto 3 \end{smallmatrix} \right]; \left[\begin{smallmatrix} z \mapsto 5 \end{smallmatrix} \right] \rightarrow \left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right]$$

|| questo completa l'elaborazione di $d_2; d_3$

$$\left[\begin{smallmatrix} x \mapsto 2 \end{smallmatrix} \right] \vdash d \xrightarrow{*} \left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right] \quad \text{completo}$$

$$\frac{\left[\begin{smallmatrix} x \mapsto 2 \end{smallmatrix} \right] \vdash d \xrightarrow{*} \left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right]}{\vdash \left[\begin{smallmatrix} x \mapsto 2 \end{smallmatrix} \right] \text{ in } d \rightarrow \left[\begin{smallmatrix} x \mapsto 2 \end{smallmatrix} \right] \text{ in } \left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right]}$$

ultimo passo

$$\vdash \left[\begin{smallmatrix} x \mapsto 2 \end{smallmatrix} \right] \text{ in } \left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right] \rightarrow \underline{\underline{\left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right]}}$$

$$\Rightarrow \vdash d_1; d \xrightarrow{*} \left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right]$$

$$\Leftarrow \text{Elab}(d_1; d) = \left[\begin{smallmatrix} y \mapsto 3, z \mapsto 5 \end{smallmatrix} \right]$$
